

MAXIMIZER (710/720) **HIGH SPEED CASE PALLETIZER**

Designed for high-throughput operations, the Maximizer palletizer delivers consistent speed, precision, and controlled product handling in demanding environments. Multiple accumulation zones enable efficient flow management, supporting continuous operation on high-speed lines.

From controlled infeed spacing to multi-lane product positioning and high-speed layer formation, the system optimizes case handling before palletizing. Automated load discharge and pallet positioning maintain continuous operation, reducing downtime between cycles.

WHY CHOOSE THE STACT MAXIMIZER (710/720) HIGH SPEED PALLETIZER

Built for high-speed production environments, Maximizer simplifies changeover while maintaining precise product handling. Tool-less adjustments and integrated controls enable fast transitions between products, supporting operations with multiple SKUs and shifting requirements.

The system's controlled conveying, case turning, and layer forming ensure consistent product positioning, improving pallet quality while maintaining high throughput performance.

Features

- Modular design supports faster installation and simplified system integration
- Controlled pallet feed ensures consistent handling and stable pallet positioning
- Flexible discharge options support both automated and fork truck handling
- Integrated pallet dispensing improves efficiency and reduces manual handling
- Comprehensive safety systems ensure protection while maintaining throughput
- Fully programmable controls enable precise operation and quick adjustment

Available Options

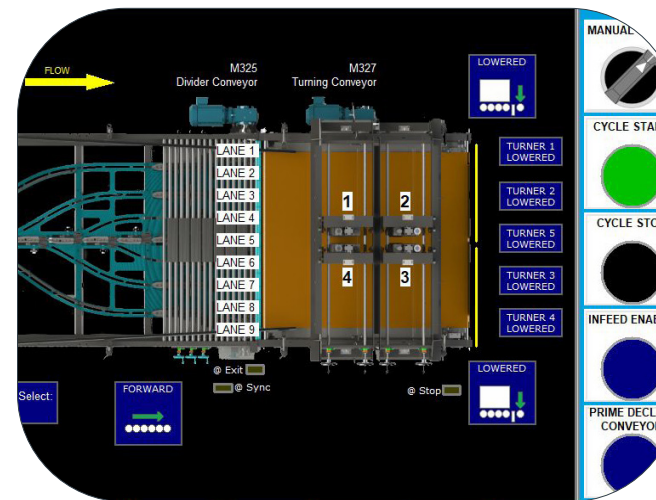

- Auto-adjust capability to support faster transitions between product formats

Hand crank adjustable overhead case turners

Pusher bar assembly

Product Builder software

MORE THAN MACHINES. A PARTNER IN PERFORMANCE.

BW Packaging supports your operation beyond installation, providing global service, parts availability, training, and system upgrades to keep your palletizing system running at peak performance as your production needs evolve.
