

# The X850: Next Generation Flow Wrapping

For block and sliced cheese, the X850 delivers faster speeds, stronger seals, and innovation that reduces wear, maintenance, and operator dependency.

**300**

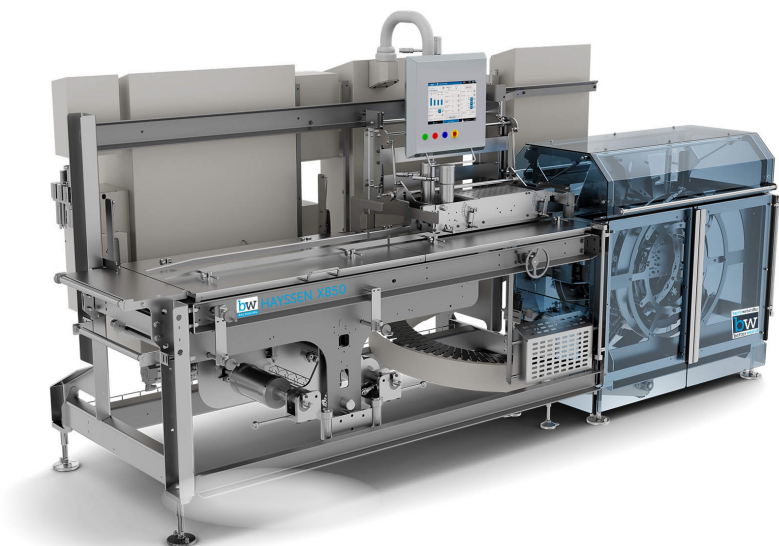

packs per minute

**:01**

dwell time for high  
seal integrity

**80M+**

cam track cycles  
without replacement

## THE X850 SOLUTION

|                            |                                                                                                                |
|----------------------------|----------------------------------------------------------------------------------------------------------------|
| <b>JAW DESIGN</b>          | No adjustments, rebuilds or dry cycling needed                                                                 |
| <b>JAW CONTROL</b>         | Servo-driven, multi-jaws auto position for smooth operation and minimized maintenance and wear                 |
| <b>TEMPERATURE CONTROL</b> | Central rotating box provides independent jaw control for quick heat-up and better recyclable film performance |
| <b>JAW MAINTENANCE</b>     | No regular rebuild — servo motion reduces wear                                                                 |
| <b>JAW CHANGES</b>         | Toolless quick-release — replace in seconds - heat up in a few minutes                                         |
| <b>CAM TRACKS</b>          | CNC-machined, segmented design ensures repeatability, easy replacement, and long life                          |
| <b>AUTO SPLICE</b>         | Built-in — prep next roll while machine running for quick changeovers and higher throughput                    |
| <b>PRODUCT JAMS</b>        | Detects and clears jams without stopping                                                                       |

## WHAT'S NEW IN THE X850

### PATENTED SERVO RING TECHNOLOGY

Each jaw moves independently, accelerating and decelerating precisely — minimizing wear and enabling tighter jaw placement.

### SMART ANTI-JAM SYSTEM

Jams are detected and cleared automatically, keeping production moving without operator intervention.

### HIGH SEAL INTEGRITY

Independent temperature control ensures thermal consistency, while servo film edge tracking maintains long seal alignment.

### AWARD WINNING OPVIEW™ HMI

Guided onboarding, RFID login, and step-by-step instructions help operators be self-sufficient and optimize productivity.

Ready to see what the X850 can do for your line?  
Let's talk about your operation — and design a solution together.
