

From RT to X850: Next Generation Flow Wrapping

For block and sliced cheese, the X850 delivers faster speeds, stronger seals, and innovation that reduces wear, maintenance, and operator dependency.

300

packs per minute

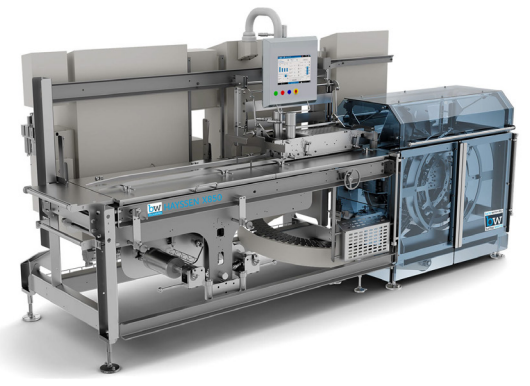

:01

dwell time for high seal integrity

80M+

cam track cycles without replacement

MODEL COMPARISON

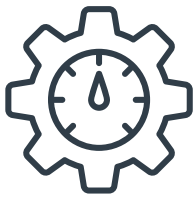

HAYSSSEN RT CHALLENGE

HAYSSSEN X850 SOLUTION

JAW DESIGN	Expertise to adjust properly and regular rebuild required	No adjustments, rebuilds or dry cycling needed
JAW CONTROL	AC motor release system limits speed and requires significant maintenance	Servo-driven, multi-jaws auto position for smooth operation and minimized maintenance and wear
TEMPERATURE CONTROL	Single control point for all jaws on die wheel	Central rotating box provides independent jaw control for quick heat-up and better recyclable film performance
JAW MAINTENANCE	Typically rebuilt weekly in sets	No regular rebuild — servo motion reduces wear
JAW CHANGES	Special tool required	Toolless quick-release — replace in seconds - heat up in a few minutes
CAM TRACKS	Bent wire, install expertise required - wear within 6 months	CNC-machined, segmented design ensures repeatability, easy replacement, and long life
AUTO SPLICE	Requires separate 3rd-party floor unit	Built-in — prep next roll while machine running for quick changeovers and higher throughput
PRODUCT JAMS	Machine stops to manually clear	Detects and clears jams without stopping

WHAT'S NEW IN THE X850

PATENTED SERVO RING TECHNOLOGY

Each jaw moves independently, accelerating and decelerating precisely — minimizing wear and enabling tighter jaw placement.

SMART ANTI-JAM SYSTEM

Jams are detected and cleared automatically, keeping production moving without operator intervention.

HIGH SEAL INTEGRITY

Independent temperature control ensures thermal consistency, while servo film edge tracking maintains long seal alignment.

AWARD WINNING OPVIEW™ HMI

Guided onboarding, RFID login, and step-by-step instructions help operators be self-sufficient and optimize productivity.

Ready to see what the X850 can do for your line?
Let's talk about your operation — and design a solution together.
